YOU BUILD WE SUPPLY

One service

De Boer Staal has an excellent reputation as a wholesale distributor of sheet steel and profiles. The sheet steel and profiles are used in the offshore and shipbuilding industry.

De Boer Snijbedrijf specialises in cutting steel and stainless steel, cutting welding edges at a range of angles and cutting steel strips to size and bevels. De Boer Snijbedrijf also supplies certified cut components that have been checked and assessed by surveyors from accredited inspection organisations such as Lloyds Register and is authorised to re-mark materials. De Boer Snijbedrijf works for clients in several branches.

As De Boer Staal and De Boer Snijbedrijf are all located in Uitgeest, joint projects are carried out quickly and efficiently. Modern machines cut and saw steel to measure and shot blast and apply anti-corrosion treatments such as red lead primer, Sigmaweld or other paint systems. By combining multiple processes, it is possible to offer customers a high quality integrated service.

STEEL AND STEEL PROCESSING

CREATE AND INSPIRE

Gratings for all industries

Offering a wide range of gratings and stair treads in steel, aluminium and stainless steel, Staco is a leading company in the European grating technology market. Staco supplies products to a wide range of industries, including building and construction, facade construction, civil engineering, offshore, shipbuilding, transport and industry at large. Staco also focuses on product innovation and development, mainly with regard to architectural applications.

Advanced computerised equipment using robot technology guarantees a high quality in design, production and delivery. This way not only standard products but also special designs and complex notches are efficiently produced. Staco can supply any type of high quality grating.

Staco is developing into a sparring partner for customers. Sophisticated project engineering and project management have led to various innovative grating applications. Staco has production plants and sales offices in the Netherlands, Belgium, Germany and England and in several Eastern European countries, such as Poland and Bulgaria.

Always an effective solution

GRATING TECHNOLOGY

RELIABLE AND FAST

Long lifespan

The Rotocoat galvanising plants specialise in the hot-dip galvanising and centrifuge galvanising of steel in accordance with NEN-EN-ISO 1461. The Rotocoat powder coating companies are specialists in applying protective powder coatings to galvanised steel, steel and stainless steel and have a Qualisteelcoat certificate. Rotocoat also provides liquid paint systems in combination with hot-dip galvanising. The clients come from many different sectors, with the major customers being the building industry and industry at large.

Customers can make use of the Rotocoat transportation service. Materials up to 3.5 m wide and 25 m long are transported without any difficulty. Rotocoat is also the right place for degalvanising, minor additional assembly work and special coatings.

The Duplex Route, the total concept for hot-dip galvanising and powder coating, offers the most durable form of protection in the fight against steel corrosion. Rotocoat provides the Duplex Route in line with NEN 5254 and NEN-EN 15773. This provides materials with a longer lifespan and as powder coating is available in virtually any colour, the result is not only durable but also stylish in appearance.

Duplex Route: 1 + 1 > 2
